# OMS BC/Bladder Systems

## BUOYANCY COMPENSATORS

OMS originally introduced its single and dual bladder BC's with proprietary elastomeric contraction band system in 1993. The single bladder models have been redesigned and now have (2) relief valves located diver's side: lower left, and right shoulder.

The dual bladder redundant model features a total of three relief valves located: primary bladder (diver's side) lower left and right shoulder, redundant bladder (Tank Side) diver's left shoulder.

All BC's are constructed from rugged ballistic nylon shells and are designed to be utilized in conjunction with OMS's hard mount backplate/harness systems.

The overpressurisation relief valves are interchangeable with the inflator hose pots so it is possible to have a variety of unique hose configurations, including, but not limited to.

1. Both inflator hoses over the left shoulder, or under left armpit.
2. Both inflator hoses over the right shoulder, or under right armpit.
3. One inflator hose over the right and one inflator hose over the left shoulder, or under right and left arm pits.

## BC FEATURES

1. **Power Deflation:** The elastomeric band tension on the bladder assists in deflation. This feature allows the user to configure the BS with inflator hoses positioned under the armpit(s) for low drag and low snag configuration.
2. **Elimination of Air Shift:** The bands evenly compress the BC so that massive air shift (from one side of the BC to the other) and resultant loss of trim (when changing body plane), is a thing of the past.
3. **Low Drag:** The 45 and 100 lb, lift BC's have significantly less drag than other lower lift capacity BC's due to the small retracted mass.
4. **Low Snag:** Again, the low mass of the OMS™ BC reduces the possibility of snagging.
5. **Trim Adjustability:** You can add or remove bands to achieve the following: (a) head up, (b) head down, (c) head horizontal, (d) adjust lateral trim (i.e. compensate for stage bottles, cameras, etc.)

OMS™ retractable BC's are offered in the following models and colours:

1. Single Bladder
  - a. 45 lb, lift capacity (J117G-45), Black Only
  - b. 100 lb, lift capacity (J117G-R) Red or (J117G-B) Black
2. Dual Bladder
  - a. 100 lb, lift capacity (J118G-R) Red or (J118g-B) Black

# OMS™ BC/Backplate Harness System

## OMS™ BACKPLATE HARNESS SYSTEMS

OMS™ backplate harness systems are designed to act as a harness system, affix a BC, and hold the cylinder(s). They must be utilised in conjunction with an OMS™ buoyancy compensator in order to provide buoyancy.

### Two Main Systems are offered:

- Backplate with Webbing:** All plates are approximately 16"L x 12"W. Each plate, Specially stiffened 2" nylon webbing and a chest area side release buckle are utilised for ease in donning/doffing your equipment. Four chest and two waist area D-rings are standard. Optional 45 or 90 degree Billy rings and shoulder pads are available.

### Backplates are offered in the following materials:

- Stainless Weight 6 lbs.
- Aluminium Weight 2 lbs.

- IQ Harness System (J-IQ):** This self-adjusting soft hard harness system is padded, form-fitting, easy to don, quickly adjustable and includes: 17 D-rings for peripheral equipment placement, , two chest area side release buckles

The unique pouch system allows any of the OMS backplates to be slipped in for superior stability. The Alloy back plate is supplied as standard. Sizes: S, M/L, XL.

OMS™ backplate harness systems are designed to be utilised with OMS™ BC's and offer the following advantages over soft mount (fabric) systems:

- Low Height, Low Drag Profile:** OMS™ hard mount systems prevent an inherent problem that soft mount systems have, and that is pushing of the BC and soft pack away from the diver's back during inflation, resulting in a higher profile and additional drag and snag potential.
- Elimination of Adaptor Plates:** OMS™ hard mount systems, when used with doubles, are more stable and DO NOT require the use of adaptor plate stabilisers that attempt to prevent the soft pack from shifting.
- Elimination of Cam Bands:** OMS™ hard mount systems, when used with doubles, DO NOT require the use of Band-Aid cam bands to stabilise the cylinders. Cam bands(s), a major potential snagging point, are not necessary with OMS™ hard mount systems.
- Better Stability:** OMS™ hard mount systems are more stable and better accommodate battery canisters, suit inflation system cylinders, and side mounted cylinders because they do not have the sagging and stretching problems associated with the soft mount fabric systems. Holes on the edges of the OMS™ stainless steel backplate and numerous D-rings on the IQ™ pack allow a number of equipment configuration options.
- Stacking weight System (NEW):** Now OMS™ stainless steel backplates can be stacked behind the stainless steel or IQ™ harness system for additional

## OMS<sup>®</sup> PROFILE™ SIDE-MOUNT SYSTEM

This system has filled a void and will offer the “at home” and traveling diver freedom from the weight concerns of handling “back mounted” doubles. Side-mount allows individuals with limited physical abilities and lower back issues to enjoy the redundancy of two tanks and two regulators by minimizing the amount of weight on the lower back and lowering the center of gravity for increased stability when entering/exiting the water. Additionally reaching behind your head to shut off or turn on your manifold valve is a thing of the past as both cylinder valves are near your hands. Traveling divers can relax knowing that easily available single tanks are all they need to enjoy redundancy and adequacy of gas supply for any dive around the world.

shown with optional OMS WING

**Item #**  
**BP-SMS**  
**Side-Mount**  
**System Setup**

**RETAIL**  
**£82.00**

**Features:**

- Allows the diver to utilize most harness and wing systems (with standardized 11 inch O.C. hole spacing)
- Over the shoulder design keeps the wing close to the divers back and allows air to travel freely from divers left to right
- Integral bib adds over 1/8” inch of abrasion protection to the vulnerable top part of the wing
- No changes to the fit of the harness throughout the inflation of the wing from empty to full capacity
- Permits the Rebreather diver to back mount the CCR scrubber and side mount the Oxygen and Diluent cylinders
- Enables the diver to back mount the bottom gas and side mount the decompression gases
- Streamlines the diver allowing access to tight, remote, hard to reach caves and wreck passage ways

## OMS® VEGA 3W LED DIVE LIGHT

OMS® has re-engineered the VEGA K2 LED flashlight with improved backend optics, reverse polarity protection and incorporated a brighter, high color temperature LED. Powered by two CR-123A batteries the VEGA produces over 180 Lumens. Couple this with a highly collimated beam and a 330 fsw depth rating and you have one of the most powerful lights in your diving arsenal. New pouch is now included.

**RETAIL**

**£92.50**

Dive Light	Item	Bulb	Burntime	Lamp Life	Output	Activation	Beam	Battery	Dimensions	Depth Rating
VEGA	192	1 Led	3Hrs	20,000Hrs	80 Lm	Twist	Spot	CR-123A	D1.5"x 4.26"	100MTS

## OMS® Ultra Bright K2 Head Lamp

The OMS® head lamp has been upgraded with an Ultra Bright (180 + Lumen) K2 LED. This light can be mounted on a helmet (helmet and hardware not supplied), placed on your Hood (band supplied) on your head (band supplied), used as a Goodman light (strap supplied) or even mounted to your chest strap (band supplied). Powered by two high capacity CR-123A Lithium batteries (supplied)

**Goodman Handle**

**RETAIL**

**£45.00**

Fig 1

**For the 2010 dive season OMS® offers the following lights:**

All Phantom™ dive lights utilize Mil Spec Hard Coat (2X harder than anodizing); incorporate captured O-Ring assemblies in the lens area and Titanium screws to hold down the bezel. The LED light heads can be held in your hand or you can affix the optional Goodman Handle (Fig. 1) or mount to a helmet.

Phantom™ lights use PCB's that are field replaceable, incorporate high reliability magnetic reed switches and 50 degree C thermal cutoff switches to prevent fires. The actuation switch incorporates a high strength Nylon lockdown screw to prevent accidental "turn On/Off".

Captured O-Rings are utilized at the cord interface to the head and canister sealing areas resulting in a less than .5% failure rate! Additionally all lights, before leaving the factory, are wet pot tested to 100 meters.

## URINARY COLLECTION DEVICES FOR WOMEN and MEN

OMS® is pleased to introduce the first sterile urinary collection device for women. Unlike the competitors product this single use glue on system is gamma sterilized, prevents urinary infections and is offered at 1/10 the cost. The men's sterile, "glue-on" condom catheter is now available in different comfort diameters and made from hypo allergenic Silicone. Both collection devices when used with the OMS® automatic Pee Valve (X-PEE), allow a fully hydrated diver to urinate as often as necessary and dump the urine outboard of the dry suit automatically.

### AUTOMATIC COMPACT PEE VALVE

Big and heavy Pee valves can tear the cells on neoprene dry suits according to one of the leading dry suit manufacturers. The OMS® Delrin Compact Pee Valve is easy to install, completely equalized, inert to the corrosive effects of urine, automatic, and prevents damage to neoprene and trilaminate dry suits with its light weight.

**X-PEE-DM** - Male Condom Urinary collection System includes: Sterile Male Condom Catheter and Automatic Pee Valve (X-PEE-DM). Specify Size: S (25mm), M (29mm), L (32mm), XL (36mm), XXL (41mm)

# OMS WARRANTY

## HOW THE OMS WARRANTY WORKS

To our loyal customers:

### HOW THE OMS WARRANTY WORKS

With regard to warranty issues:

All goods purchased from an OMS authorized dealer must be returned to that dealer in order to have a warranty claim considered.

**Gray Goods:** These are OMS items purchased outside of the buyers home country. For example a USA resident purchases an OMS BC in Singapore or a German resident purchases by internet a BC from the US or Canada. These goods in order to be considered for warranty consideration must be returned to the seller at the owners expense. If the German resident or USA Resident mentioned earlier does not wish to return the BC to the seller he may wish to call the OMS dealer or distributor in his country and have the item repaired. In this case the OMS BC will be considered to be Gray Goods and will be repaired or replaced at charge and at the sole option of the local distributor or OMS.

**OMS products purchased from Unauthorized dealers or distributors:** Those goods purchased from unauthorized Dealers or Distributors do not carry an OMS warranty. Any claims for warranty will not be honored (except where required by law) and any and all repairs or replacements will be done at charge and at the sole option of OMS.

**Used equipment:** The warranty is not transferable from the original owner to the new owner and any claims for warranty will be quoted out on a time and materials basis. The owner will be required to pay for all shipping and handling charges.

**Reels:** OMS has announced that the plastic parts on its entire line of reels are unconditionally warranted for life against breakage. This also includes the revolutionary compact Kevlar line explorer reel and the new line of "finger reels". Just return the plastic parts (less line) and OMS will send out free replacement parts.

# Terms & Conditions

## TERMS & CONDITIONS

The Terms & Conditions stated here relate to goods and services provided by Otter Watersports. Placement of any order will be taken as an indication of willingness to be bound by these Terms & Conditions.

The Trade prices shown in this brochure are exclusive of VAT, however our Retail Prices shown in this brochure include VAT @ 17.5%. We reserve the right to alter or ammend our prices without prior notice being given via a replacement brochure/letter.

Please note that it is the responsibility of the Customer to ensure that we have received an order. We cannot accept liability for any order not received.

Orders are subject to a charge for Carriage. Carriage will be charged at the price shown when ordering, where goods can be delivered using normal UK postage the delivery charge will be reduced to reflect this method of delivery. If any Customers request an order to be sent via express delivery they will automatically be charged for this (price on application).

## PAYMENTS

Payment can be made via Visa/Mastercard/Switch/Delta/Company Cheque/Personal Cheque/Bank Transter. All Proforma Goods will be sent once payment has been received/cleared.

## OMS PRODUCTS

All/Any OMS products which are currently being advertised by OMS USA can currently be ordered through us although all Products which are not stock items will be on a 6-8 weeks delivery basis.

**Please note that we can only import Products which meet with  
Current UK Specifications.**
